BRAZOS RIVER BASIN (12)

The Brazos River Basin has the largest drainage area of all basins between the Rio Grande and the Red River in Texas. Total basin drainage area is 45,573 square miles, of which approximately 43,000 square miles are in Texas; the remainder are in New Mexico. The headwaters of the Brazos are formed by three forks—the Double Mountain Fork, South Fork, and Clear Fork. Principal tributaries to the Brazos downstream of the Clear Fork are Yegua Creek, Bosque River, Little River (formed by the confluence of the Leon, Lampasas, and San Gabriel Rivers) and the Navasota River.

Source: The county boundaries and major streams were acquired from the U.S. Census Bureau and are part of the 1992 TIGER/Line dataset (1:100,000). The minor streams are based on the Environmental Protection Agency's River Reach File Version 3.0 Alpha Release (RF3-Alpha), completed in 1998 at a scale of 1:100,000. The river basins are derived from the 1974 Hydrologic Unit Map of Texas (1:500,000) and were digitized by the U.S. Geological Survey in 1990. The classified stream segment names, numbers, and boundaries are defined in Title 30, Chapter 307 of the Texas Administrative Code (TAC) and were revised by the Texas Commission on Environmental Quality in 2000. The highway data are based on enhanced U.S. Census Bureau 1990 TIGER/Line data (1:100,000) published in 1992 by Geographic Data Technology (GDT), Inc. The cities were derived from U.S. Census Bureau 1998 TIGER/Line data (1:100,000). At the request of the TCEQ Water Quality Division, additional modifications were made to the streams and basins linework in the vicinity of Upper Oyster Creek, Fort Bend County.
